

Software Developer

HubListener || Hamilton, ON

We are looking for a Software Developer to join our rapidly growing startup focusing on software quality in Github projects.

This is a unique opportunity to join a growing team of creative and passionate individuals pushing change in the way we look at GitHub projects. In this role, you'll work closely with our developers, and directly with our client to provide technical understanding in quality metrics, custom development or any other software development work necessary to meet our customer's needs.

The team works in quick agile sprints, using the techniques and software best suited for solving our challenging problems.

Key Responsibilities:

- Contribute to the development of core functions of HubListnener
- Collaborate on GraphQL V4 queries
- Work closely with our customers and developers during trend analysis for scientific computing
- Conduct code reviews and ensure solutions are built and tested.
- Write and maintain documentation relating to system requirements, verification, and validation, etc.

Preferred Experience/Education:

- University Degree in Computer Science, Software Engineering, or a combination of relevant experience
- A high-level of proficiency of JavaScript, Node.JS, npm and related programming languages
- Strong understanding of GitHub GraphQL API v4
- Solid experience with git, Github & open-source ecosystems
- Excellent understanding of empirical software and quality metrics.
- Highly self-motivated with a bias for results delivery
- Proven ability to work creatively and analytically in a problem-solving environment
